

Forklift Attachment

Forklift Attachments Stockton - Many different jobs would be impossible without the help of forklift attachments. The wide range of forklift attachments make most jobs not only possible but also safer and quicker. In addition to general forklift training, operators must be properly training for each attachment they intent to use. Forklift attachments come in a wide variety of hydraulic and non-hydraulic attachments. The benefits of utilizing a forklift attachment include decreasing: 1. Employee accidents; 2. Damage to stock; 3. Manpower; 4. Time; and 5. Fuel consumption. Equipment Considerations A forklift attachment can replace an existing forklift attachment or can be added to a forklift that does not already have one. Several equipment-related factors must be considered before any forklift attachment is replaced or added. These considerations include: 1. The forklift type; 2. The forklift's capacity; 3. The carriage type; and 4. The number of hydraulic functions. Failure to properly consider these factors will increase the safety risk associated with operation of a forklift and its attachments and increase the risk for damage to the forklift, the attachment and surrounding area, including stock. Extra safety factors must be considered which will be discussed in more detail. Forklift Rating and Re-Rating These machines are provided with lift capacity ratings from the manufacturer that need adjusting when changing or adding any forklift attachments. Manufacturers of forklift attachments usually offer calculators available online to estimate the safe lifting capacity when using a particular attachment. Accurate lifting capacities are only available from the forklift manufacturers. The first step before installing any attachment is to get in touch with the authorized local forklift dealer to request that that forklift brand is re-rated accordingly with the attachment. There will be a new specification plate that is factory authorized once the forklift manufacturer has re-rated the machine. The newly upgraded specification plate will replace the original plate and needs to be installed showing the new forklift rating. Equipment Upgrades Forklift attachments rely on the machine's hydraulic function and are made up of a forklift valve that has a lever situated close to the operator. This creates two passages of pressurized hydraulic oil for powering the attachment features. While not all forklift attachments are hydraulic, hydraulic attachments often include more features than the forklift has valves. When this happens, the forklift needs to have one or more valves added. There are several methods of adding a valve. Forklift manufacturers make accessories for valve and hose routing. There are plenty of labor and parts involved which can be costly enough to make this an impractical solution. Other options include adding a cable reel and a hose in conjunction with a solenoid valve to divert oil from an existing location. The main issue is that the cable reels and hose may block the view of the operator and these items can be damaged. There are kits available that use a solenoid valve and specialty hoses that allow for the reinforced braid to double as an electrical conduit. Since these hoses replace existing forklift hoses, they remain safe from external damage while maintaining clear vision for the operator. Safety Considerations Proper training must be obtained prior to fitting any forklift attachment. Operators need to be competent with removing, operating and fitting the attachment before using it. Before using any forklift attachment, two safety issues need consideration. First, any attachment on a forklift will reduce its nominal load rating, as mentioned above. The nominal load rating is determined with forks and a stock fork carriage. It is important to note that the real load rating may be significantly lower. Using any type of forklift attachment will affect the center of gravity on the machine. Obviously, the stability of the forklift is reduced. Since the attachment's weight is prominent in front of the fulcrum point on the forklift, the operator needs to drive the machine as though it is partially loaded even before it is carrying a load. Operators need to travel gently and slowly every time they use an attachment and take extra care while turning. Every attachment should be listed on the forklift capacity data plate. To maintain safety, special checks need to be completed before using any forklift attachment. The forklift attachment needs to be the right one for the type of forklift being used, appropriate for the load at hand, correctly attached, locked in place and permitted on the data plate of the forklift. List of Common Forklift

Attachments Below is a list of popular forklift attachments and their general uses. There are numerous forklift attachments and this list will cover the most popular. As you will see, the large variety of attachments available have the capacity to greatly increase the efficiency of many jobs. **SIDESHIFTER:** The operator can manipulate the forks laterally with a sideshifter. This allows for easier load placement without having to move the entire forklift. **FORK POSITIONERS:** The fork positioners adjust for different loads by moving the forks together or apart in relation to each other. **DIMENSIONING DEVICES:** Dimensioning devices feature cargo dimensions useful for creating better efficiency in trucks, trailers and warehouses. This technology is often used alongside billing systems that monitor volume. **ROTATOR:** Rotators help to right tilted skids and are useful for fast unloading and tackling custom load requirements. Many attachments include a rotator feature. **ROLL AND BARREL CLAMP:** The roll and barrel clamp simplifies grasping rounded loads such as barrels. It has numerous pressure settings for handling fragile items with less damage potential. This attachment often has a rotate function to change the load from a vertical to a horizontal position. **CARTON AND MULTIPURPOSE CLAMP:** The carton and multipurpose clamp has pressure settings and is used for handling more squared shaped loads. It easily masters boxes, bales and cartons. **POLE ATTACHMENTS:** Pole attachments are long metal poles in place of the forks. They are useful for picking up linoleum and rolled up carpet or similar items. **SLIP SHEETER OR PUSH-PULL:** Allows operator to transport slip sheets by clamping onto slip sheets, as opposed to pallets, and either pulling the slip sheet onto wide and thin metal forks for loading or pushing the slip sheet to unload. Some variations of the attachment are Save, where the slip sheet is removed for reuse, or Standard. **DRUM HANDLER:** Allows for grasping drums, either with a spring-loaded jaw to grip the top lip of a drum, or with arms that encircle the drum, for transport. **DRUM AND STORAGE BIN TIPPER:** The drum and storage bin tipper is designed for easier transport of liquid items or loose materials into bigger containers. **MAN BASKET:** The man basket is a lift platform to allow workers to complete jobs with brackets and railings and safety harnesses. **TELESCOPIC FORKS:** The telescopic forks are used in locations with a two pallet stacking design where one shelf is placed right behind another with no aisle between them. **SCALES:** Scales are helpful for allowing operators to transport pallets while weighing them. This stops the need for interrupting work with regular travel to the scales. It can be used in legal-for-trade weights for operations that bill by how much items weigh. **SINGLE-DOUBLE FORKS:** Single-double forks facilitate movement of a single platform or pallet or two side-by-side pallets. This is useful for transporting specialty items with the right attachments employed. It can be used with normal lifting tasks and stops the need for owning two separate machines. This greatly reduces the cost of maintenance and operation that is used with multiple forklifts. **SNOW PLOW:** Snow plows are used to remove snow and redistribute it; however, this attachment can be used with other loose kinds of material. **SKIPS:** Allows safe and speedy removal of waste to the appropriate skip or waste compactor. Skips are available in a roll-forward type and a bottom-emptying type. **BOOMS AND JIBS:** Allow for extended reach of a forklift to transport suspended loads or loads that are stacked high or deep. They are available in different setups such as reach over and precision lifting or low profile fixed and extendable lengths.
